

A radical new development in marquee design, the T-System is a modular tensile structure which uses a minimum of metalwork combined with tensioned fabric panels to provide a stunning clear span interior space with gracefully arched sides. This new design, which has a patent pending, has generated an enormous amount of interest.

Much more modern in appearance than a conventional marquee, the T-System appeals to event organisers wanting something different from the familiar clearspan marquees - now seen everywhere - to offer their clients. Interest in this new type of temporary structure has already been shown by those involved in sectors as diverse as corporate events, motor racing, polo, golf clubs and the hospitality industry, as well as marquee hire contractors.

MD of Bond Fabrications, Nick Acland explained: "So many people have congratulated us on breaking the existing marquee mould. We have had very good feedback on its innovative

appearance and the feel of the internal space, and people have commented that it will appeal to those who want a more contemporary look for parties and corporate events."

The T-System wins on practicality as well as looks - it is modular (extending indefinitely in 6m bays), has window walls if needed, is easy to transport and quick to erect. Robust and produced by manufacturers with nearly 20 years' experience in the field, its design

Highly Commended:

New Product/Service of the year

Bond Fabrication's T-System

Sponsor: Towergate Underwriting Entertainment

conforms with BS EN 13782:2005 and is certified for wind speeds up to 100km/h.
